

Next-Gen Uni-Pak

1/2 TO 6 HP MULTI-REFRIGERANT AIR COOLED CONDENSING UNITS

1/2 TO 6 HP

The Next Generation of Uni-Paks are Here!

ColdZone's Next-Gen Uni-Pak ½ through 6 HP condensing units are engineered with an exciting new design that provides increased efficiency, more standard features, easier serviceability, and more catalogued options.

Next-Gen Uni-Paks are ideally suited for use in a variety of commercial applications such as cafeterias, convenience stores, restaurants and fast food outlets while providing the versatility to excel in a full array of other applications. These new units provide a winning combination of high quality, increased flexibility and greatly improved efficiency for even lower long-term operating costs.

The small profile product line is designed to utilize R404A or other low GWP refrigerants R407A, R407C, R448A and R449A. Units are available with low-cost hermetic or efficient and quiet scroll compressors. The standard Next-Gen Uni-Pak is rated for operation in ambient air temperatures up to 110°F.

Integral Subcooling Circuit

All Next-Gen Uni-Pak units feature an integral subcooling circuit that allows saturated liquid to flow from the receiver to the condenser where the refrigerant is subcooled by ambient air. This provides an average of 3 to 5°F of subcooling for higher efficiency while assuring optimal expansion device operation.

NEXT-GEN UNI-PAK CONDENSING UNITS

Standard Features

- Hermetic or Scroll Compressors
- All-weather - Galvanized steel painted housing
- Generously sized high efficiency condenser, enhanced copper tubes/aluminum fins
- Integral Liquid Subcooling Circuit provides subcooled liquid to the expansion device
- Base mounted shut-off valves placed external to cabinet for easy access
- Liquid line kit with filter/drier and sight glass with moisture indicator
- Suction line piping
- Larger electrical panel with hinged/removable door
- Color coded point-to-point wiring
- Crankcase heater
- Refrigerant receiver with isolation valve and pressure relief plug

- "A" Vintage Units feature PSC Motors, "B" Vintage Units feature EC Motors
- Encapsulated high pressure (auto reset) and low pressure (auto reset) controls (adjustable low pressure control is standard on low temperature models)
- Electronic defrost timer with defrost contactor/relay on low temperature standard models (2 evaps. maximum)
- Electronic air defrost timer (Medium temperature standard models only)
- UL and cUL listed for outdoor use

Flooded models include flooded head pressure control as a standard feature.

Non-flooded models include mild ambient fan cycle control as a standard feature.

Easy access / removable control panel door
Color-coded and numbered point-to-point wiring for easy maintenance

Quick access to shut-off valves from cabinet exterior

Replaceable core liquid and suction filters available as an option for 4 to 6 HP flooded and non-flooded models

Options

- Adjustable high/adjustable low pressure control
- Liquid line without components: Pipe only
- Liquid line with premium components: Replaceable core filter/drier and sight glass (Option on models in FM4 Cabinet*)
- Suction line components: Sealed filter
- Suction line components: Replaceable core filter (Option on models in FM4 Cabinet*)
- Suction line accumulator
- Oil separator (Option on models in FM4 Cabinet*)
- Oversized receiver
- Pumpdown toggle switch
- Heated and insulated receiver
- Phase loss monitor
- EC fan motors (Option on Vintage "A" models)
- Polyester coated condenser fins
- Thru-the-door non-fused disconnect switch (Option on models in FM3 or FM4 Cabinet*)
- Thru-the-door fused disconnect switch
- External fused disconnect
- 316 Stainless steel cabinet
- Mechanical air defrost timer
- Crankcase pressure regulating valve
- Hail/Snow guards

* See pages 22-24 for associated cabinet size drawings.

RLA = Rated Load Amps LRA = Locked Rotor Amps MCA = Minimum Circuit Ampacity MOPD = Maximum Overcurrent Protection

MCA includes 1 amp allowance for control circuit requirement.

† Note: Maximum Evap. fan amps and maximum defrost amps are shown to provide ratings when electric defrost is required and is an optional feature. Maximum Amp value used to determine MOPD. Exceeding these values invalidates the listed MOPD and requires a revised calculation. Contact Application Engineering when amp draw requirements deviate from the chart values.

[^] C*H100E4S and C*H125E4S are not available in 200-220V/1/50 Hz.

^{^^} C*H100E4S, C*H125E4S, C*H150E44, and C*H200E44 are not available in 200-220V/3/50 Hz.

[‡] C*H055E4S, C*H080E4S, and C*H090E4S are not available in 208-230V/3/60 Hz.

* Each asterisk represents a variable character based upon model, voltage, and vintage ordered. See page 4 for nomenclature.

RLA = Rated Load Amps LRA = Locked Rotor Amps MCA = Minimum Circuit Ampacity MOPD = Maximum Overcurrent Protection

MCA includes 1 amp allowance for control circuit requirement.

† Note: Maximum Evap. fan amps and maximum defrost amps are shown to provide ratings when electric defrost is required and is an optional feature. Maximum Amp value used to determine MOPD. Exceeding these values invalidates the listed MOPD and requires a revised calculation. Contact Application Engineering when amp draw requirements deviate from the chart values.

^ C*O600L4S and C*O600E4S are not available in 200-220V/1/50 Hz or 208-230V/1/60 Hz.

* Each asterisk represents a variable character based upon model, refrigerant, voltage, and vintage ordered. See page 4 for nomenclature.

† Estimated dBA values at 10 feet from the unit. Correction factors: Deduct 6 dBA for 20 to 40 feet, 12 dBA @ 40 to 60 feet. Ratings at the outlet of the discharge air. The actual measurements may vary depending upon installation variables. Environmental factors may have a significant influence on this data.

If the low temperature model has a numerical value in the table above, the following statement applies: "This refrigeration system is designed and certified for use in walk-in freezer applications."

* Each asterisk represents a variable character based upon model, voltage, and vintage ordered. See page 4 for nomenclature.

Dept. of Energy AWEF ratings for low temperature condensing models will be implemented in 2020.
